Snowtape: best Internet radio app ever?

by [Jay Hathaway](#) (RSS feed) Mar 15th 2010 at 10:00AM

If you're old enough to remember taping songs from the radio, you'll immediately recognize how cool [Snowtape](#) is. It's an OS X app that lets you easily find, listen to and record from online radio stations. It's like the combination radio/tape deck **of the future!** If you were fortunate enough to come of age in the age of the mp3, then just think of Snowtape as the awesome "record" button that iTunes doesn't have.

Snowtape doesn't just play and record, though. It also lets you name, tag and add album art to your recorded audio files, so they'll fit right in with iTunes or your iPod. It has other perks, too, like the ability to schedule a recording using iCal, in case you're worried about missing a favorite radio show. Snowtape makes discovering new favorites easier, too, by building in a directory of stations, and allowing users to add their own stations to the list.

If you need more proof that Snowtape is a really well-thought-out app, check out the integrated editing feature that lets you trim the beginning and end of your recordings. There's even a companion iPhone app! If anybody needs me, I'll just be over here in my rocking chair, listening to Snowtape and reminiscing about what a pain it was to edit radio mixtapes by recording silence over the extraneous bits.

Featured Time Waster

Sushi Cat is an adorable, full-bellied Time Waster

Sushi Cat is one of the cutest Flash games I've ever run across. You play a blue cat with a major talent for eating and, fortunately for you, every level is filled with delicious sushi! The controls are simple: you aim and drop from the top of the screen using the mouse, trying to hit as much sushi as you can on the way down. Eat enough sushi, and you can go on to the next level. Your score depends on how much sushi you eat, and which bucket the cat lands in when it finally reaches the bottom of the screen. The more ...
